SUMMARY

Software Engineer with 5+ years of experience in high-performance C++ systems, backend tooling, and local AI infrastructure. Specialized in containerized vLLM serving, agentic routing gateways, tool-calling workflows, and large-scale server stress testing. Proven track record of optimizing latency, concurrency, and developer productivity across distributed teams.

EDUCATION

Hanoi University of Science and Technology

Sep 2014 – Oct 2021

BS in Global ICT (Global Engineer Program in Information and Communication Technology)

EXPERIENCE

Gameloft

Mar 2021 – Present

Game Programmer (C++ Systems & AI Infrastructure)

- Local LLM Infrastructure & Serving (Jun 2026–Present): Deployed containerized LLM inference engines on multi-GPU nodes; optimized vLLM memory allocation, KV-cache, context length, concurrency, and speculative decoding via reproducible stress and tool-use benchmarks.
- LLM Gateway & Agentic Routing: Engineered an Anthropic/OpenAI-compatible AI Gateway in TypeScript to route agentic developer tools (Claude Code, OpenCode) across local vLLM instances and cloud models with streaming protocol translation, authentication, and PostgreSQL usage metering.
- Automated Crash Analysis Pipeline: Architected an AI-assisted Linux core-dump diagnostic platform (S3 → WSL/GDB with archived symbols) that retrieves contextual stack traces, groups related crashes, and leverages LLMs for automated root-cause analysis and patch proposals via a PostgreSQL dashboard.
- Automated SVN Code Review System: Developed a model-agnostic code review platform for SVN repositories featuring scheduled LLM evaluations, finding classification, verdict tracking, and notification workflows backed by PostgreSQL.
- Backend Load & Stress Testing: Built an automated testing platform simulating thousands of concurrent connection players to stress-test game backend servers and event APIs prior to production deployment.
- Core C++ & Client-Server Gameplay: Developed high-performance C++ gameplay systems and features across both client and server, contributing to Android platform porting and optimization.
- Cross-Stack & SDK Delivery: Delivered core features across ActionScript legacy titles and Unreal Engine 5 migration projects, integrating third-party backend SDKs including Netflix and regional distribution platforms.
- CI/CD Infrastructure: Designed and maintained Jenkins build and deployment pipelines for Sniper Fury, improving release stability and operational efficiency.
- Technical Leadership: Led technical workshops and programming contests while mentoring junior engineers and standardizing technical documentation in fluent business English.

TECHNICAL SKILLS

Core Systems & Backend Engineering: C++, Python, Node.js, REST APIs, PostgreSQL, Android Platform Development, Linux, GDB, Docker, Podman

AI Engineering & LLM Infrastructure: Local LLM Inference, vLLM, Model Serving Optimization, LLM Gateways, Tool Calling & Function Calling, Agentic Workflows, Claude Code, OpenCode, Claude Agent SDK

DevOps & Professional Tools: Java, Unreal Engine 5, Jenkins CI/CD, Git / GitFlow, SVN, Jira
